USAID – SHADY AGENDA EXPOSED

Centre for Integrated and Holistic Studies (CIHS) is a non-partisan, independent, research think tank headquartered in New Delhi, India. CIHS is dedicated to enriching individual decision making by presenting innovative ideas, fostering informed public debate, and advancing effective policy and programme development to advance humanity. Aspiring to positively shape the future of society, CIHS works to share knowledge on pressing global challenges and opportunities by fostering a ‘culture of scholarship’ and advancing informed public engagement.

Every effort is made to ensure that the information contained in these publicly available briefings, factsheets, reports are correct at the time of publication. However, if you have any comments on our documents, please email info@cihs.org.in

USAID: Shady Agenda Exposed

INTRODUCTION

Foreign influence peddling is not new to India. From colonial trade networks to modern soft power strategies, external forces have long sought to shape the nation's socio-political landscape.

In the present era, dominance is not limited to dominance through military strength but exercised via economic dependencies, cultural narratives and policy interventions to try and subjugate communities to slavery of ultra-modern variety.

In Indian context, foreign influence is often orchestrated through a meticulously structured network of private corporations, non-governmental organizations (NGOs), think tanks and academic institutions with funding streams strategically directed to shape public discourse and policy formulation. And, in most cases, it's an operation of the deep state. At the heart of this intricate web, the common patron is United States Agency for International Development (USAID).

USAID's role takes on a different shade—one that demands urgent scrutiny. This report is not just an exposé of financial transactions; it is an indictment of sophisticated machinery of influence operating under 'development assistance' banner.

USAID, like many other American institutions, presents itself as a beacon of global goodwill. Yet, behind the veil of humanitarian aid lies a well-oiled apparatus designed to align recipient nations with U.S. strategic interests. From Latin America to Southeast Asia, the agency has long been accused of orchestrating political realignments, funding subversive movements and engineering economic dependencies. The question is not whether USAID wields influence, but rather, how much of India's policy space was being shaped by it?

USAID was formally established on November 3, 1961, by an executive order issued by President John F. Kennedy under Foreign Assistance Act of 1961. The act consolidated various foreign aid programs that had existed under different agencies, creating a single, centralized body with a streamlined mission. This was not made in isolation but was part of direct response to Cold War outcomes.

The global battle for influence between United States and Soviet Union have had reached a new level where military interventions alone were insufficient to secure strategic footholds. From the outset, USAID was never just about humanitarian aid. It was designed as an instrument of American foreign policy and deep state as a soft-power weapon to project U.S. influence into strategically significant regions.

Kennedy's administration framed foreign aid as an essential pillar of its global diplomacy, ensuring that economic assistance became a means of securing allies, countering Soviet expansion and embedding American ideologies in developing nations.

During its congressional debates, the formation of USAID was met with broad support from U.S. legislators, who saw it as a necessary weapon for expansion of American influence. The U.S. Congress, particularly through House Foreign Affairs Committee and Senate Foreign Relations Committee, extensively discussed how foreign aid would be leveraged to maintain U.S. supremacy on the global stage.

Among the stated goals were economic growth, political stability and resistance to communist influence. However, many of the discussions also revealed a clear, underlying motive: USAID would serve as a key tool for engineering socio-political environments in ways that aligned with American interests. At its inception, USAID's mission was couched in the language of humanitarian assistance, with an emphasis on alleviating poverty, improving healthcare, and fostering economic growth.

Yet, behind the scenes, its actual function was to create dependencies on American financial aid, ensuring that recipient countries remained within Washington's sphere of influence. The agency's structure allowed it to bypass formal diplomatic channels, working directly with local organizations, governments, and private entities to ensure that U.S. strategic priorities were embedded into national policies and governance frameworks.

Since its inception, USAID has functioned as more than just an aid agency. It operates with a blueprint that prioritises geopolitical interests over genuine humanitarian concerns. In country after country, its funding patterns, organisational alliances and programmatic focus have reflected an uncanny alignment with broader American strategic objectives.

India, with its rich cultural history, diverse demographic landscape and complex socio-political environment, has been a prime target for such influence. The structure of USAID's operations in India is a testament to its multi-layered approach. Funding is directed not just towards governmental projects but, more significantly, through a vast web of non-government organizations, civil society outfits and policy think tanks.

While many of these initiatives ostensibly focus on issues such as gender equality, environmental sustainability and economic empowerment, a closer examination reveals a consistent pattern—an underlying effort to shape public discourse, influence policy decisions and gradually alter India's socio-political ecosystem in ways that align with Western narratives. This is akin to the ways American establishments used multi-lateral financial institutions as dovetail to further its interests.

Consider the nature of projects USAID funds: research grants, development initiatives, capacity building programmes and human rights campaigns. These efforts, on face value, appear noble, yet they often carry an embedded agenda. By funding specific areas of research and advocacy, USAID steers discussions towards preferred narratives, creating a climate that is receptive to external influence. This soft power strategy is not merely about funding change; it is about ensuring that the change serves specific ideological and strategic interests.

Aid is rarely neutral. It is, more often than not, a calculated investment in a particular vision of the world—one where influence is exerted not through direct force but through economic and social

leverage. Countries that accept aid without scrutiny often find themselves gradually entangled in obligations that shape their governance structures, economic policies, and even cultural dynamics.

USAID's engagements in India have followed a pattern observed across multiple countries where it has a significant presence. Through its funding mechanisms, the agency has sought to gain an outsized role in critical sectors: media, education, civil society activism, and grassroots mobilisation. Each of these arenas provides an opportunity for long-term influence—an ability to subtly shape public opinion, elevate certain ideologies and even exert political pressure when needed.

Take, for instance, USAID's investments in India's health sector. Officially framed as efforts to enhance healthcare access and disease prevention, these programs serve as an entry point for broader influence. They create dependencies on foreign funding, positioning USAID-backed entities as indispensable players in national policymaking. Over time, this fosters an ecosystem where domestic institutions rely on external resources, inadvertently ceding control over critical areas of governance to foreign agencies.

Another key domain of USAID's focus in India has been gender and social equity programs. While initiatives aimed at improving women's rights and minority welfare are crucial, USAID's selective funding choices reveal a pattern where support is funneled towards organizations that promote specific ideological standpoints. By favouring groups that align with Western and purported progressive narratives, USAID effectively marginalises indigenous movements that operate outside its preferred framework, ensuring that discourse remains within a controlled spectrum of acceptability.

India stands at a critical juncture. Its trajectory as an emerging global power will be defined not just by its economic and military strength but by its ability to celebrate its sovereignty over its cultural, political, and developmental choices. USAID's presence in India must be examined through this lens—not as a benign force of goodwill, but as a strategic entity that seeks to mold India's future in a direction that serves external interests.

The time for complacency is over. India's ability to chart its own course in the global order hinges on its willingness to confront and challenge narratives imposed from the outside. The true measure of sovereignty is not just the ability to reject external control, but the power to define one's own future—free from the veiled hand of foreign influence.

USAID AND GLOBAL DISRUPTIONS

With billions of dollars invested in international development projects each year, United States Agency for International Development (USAID), has long been a pillar of American foreign aid. But, over the years, the agency has come under scrutiny and accused of corruption, wasted spending and poor management in several nations. Below is a summary, by countries, that explores some of the most important accusations and complaints made against USAID.

INDIA

\$ 21 Million¹ for 2024 Elections: Covert Foreign Intervention?

A troubling question is raised by USAID's \$21 million allocation to "boost voter turnout" in India's 2024 parliamentary elections: Why is a foreign government supporting voting in a sovereign state?

India, largest democracy in the world, has a history of free, fair and high voter turnout; in the 2019 General Elections, 600 million people cast ballots without outside interference. What, therefore, is USAID trying to "fix"?

USAID funded \$21 million in India for "voter turnout" via CEPPS, DOGE revealed (Image: File/Deccan Herald)

Political engineering, destabilisation and clandestine influence activities have frequently resulted from USAID's engagement in foreign countries. Under the guise of democracy-building, these "assistance programs" have served as platforms for advancement of geopolitical objectives from Latin America to Eastern Europe. Is the next target India?

Source: CEPPS

Through carefully selected NGOs and advocacy groups, this so-called "assistance" tries to influence public opinion, finance narratives, and influence election results. It is blatantly neocolonial. It is no accident that as India asserts its strategic independence on international matters, these interventions become more intense. Also, it's rather quixotic that US with questionable track record of low voters turnout sought to spend for high turnout in India whose record of polling is impeccable.

AFGHANISTAN

As a review of its recent history, USAID has been the target of similar accusations, much before Trump administration targeted the agency. It has been charged with corruption and financial mismanagement in Afghanistan.

Since 2001, U.S. Agency for International Development (USAID) has played a significant role in Afghanistan's development and reconstruction initiatives. Nonetheless, the organisation has consistently been accused of poor administration, ineffectiveness, corruption, and political bias in the disbursement of aid. Critics contend that due to financial irregularities and security issues, USAID's initiatives in Afghanistan have frequently fallen short of producing sustainable development results.

Investigations have revealed billions of dollars in fraud, waste, and abuse in USAID projects including those conducted by the Special Inspector General for Afghanistan Reconstruction (SIGAR). Money meant for healthcare, education, and infrastructure was frequently misappropriated, and many projects were either abandoned or not properly maintained.

There was no direct monitoring because USAID mostly relied on contractors and local middlemen. It was reported that a sizable amount of aid was embezzled through exaggerated project expenses and fraudulent contracts.

Numerous projects financed by USAID have come under fire for being unsustainable, short-lived, and failing to take local governance structures into account. Although schools and clinics were constructed, they frequently lacked long-term funding, qualified personnel, and equipment.

Rather than being in line with actual humanitarian needs, USAID's strategy in Afghanistan was primarily in line with American military and counterinsurgency goals. As a result, projects were focused on areas of strategic military relevance, rather than where they were most required.

A cycle of elite capture was reinforced by USAID initiatives that frequently collaborated with warlords and powerbrokers who were charged with corruption and violating human rights. Local residents became resentful as a result, which hurt USAID's and the Afghan government's legitimacy.

According to reports, subcontractors who paid "protection money" to prevent attacks on projects may have indirectly transferred USAID monies to the Taliban. This sparked worries that the very insurgents the US was battling were being indirectly funded by US government dollars.

Although rebuilding Afghanistan and improving lives was USAID's purpose, its efficacy was compromised by systemic execution failures, lack of control, and political entanglements. A common example of the ineffectiveness of foreign aid when it lacks accountability, local ownership and a long-term vision is the failure of USAID's efforts in Afghanistan.²

NIGERIA

A Chemonics subcontractor in Nigeria committed a multimillion-dollar fraud. In 2021, the Global Fund's Office of Inspector General claimed to have discovered this substantial fraud, underscoring the weaknesses in USAID's contractor monitoring.

United States Agency for International Development (USAID) in Nigeria has been the target of numerous charges and grievances, mainly related to its involvement in governance initiatives, socio-political interventions, and humanitarian assistance in Nigeria. Among the principal accusations are:

Funding Controversies: Under the pretense of providing humanitarian relief, USAID has been charged with covertly aiding organisations associated with political and religious extremism. Some monies intended for development, according to critics, have been diverted to non-governmental organisations with dubious links.

Interference in Domestic Affairs: Concerns have been raised that USAID's governance initiatives have an excessive impact on domestic political and policy choices in Nigeria and frequently serve

² <https://www.sigar.mil/Portals/147/Files/Reports/Lessons-Learned/SIGAR-16-58-LL.pdf>

American strategic objectives at the expense of Nigeria's ambitions. According to certain officials, USAID's operations compromise Nigeria's independence.

Lack of Transparency: Concerns have been voiced by a number of civil society organisations and Nigerian watchdogs over USAID's project implementation, pointing to a lack of accountability in the distribution of funds, project execution, and monitoring systems. According to reports, money is frequently used for administrative expenses rather than helping Nigerian communities directly.

Cultural and Religious Sensitivities: Conservative and religious organisations in Nigeria have reacted negatively to USAID's support of gender rights, LGBTQ+ concerns, and reproductive health programs because they perceive these efforts as attempts to impose Western values that are at odds with local customs and beliefs.

Allegations of Exacerbating Conflicts: By giving preference to some ethnic or religious groups over others when distributing aid, some observers contend that USAID's engagement in conflict-prone areas, like the Northeast, has unintentionally exacerbated tensions. According to reports, this has increased misgivings and charges of prejudice.

RUSSIA

USAID provided funding to the Harvard Institute for International Development (HIID) in the 1990s to help reconstruct Russia's economy. However, the project was tainted by controversy as it was alleged that HIID advisers had misused government funds and had conflicts of interest due to their personal investments in Russia. USAID's grant to HIID was terminated as a result of this incident, and people involved were sued.

The United States Agency for International Development (USAID) was expelled from Russia in 2012 as a result of serious charges and grievances it had received there. According to the Russian government, USAID engaged in actions that aimed to weaken national sovereignty, supported opposition movements, and meddled in domestic politics.

Political Interference: Russian officials charged USAID of providing financial support to opposition groups, particularly those associated with political discontent and anti-government demonstrations. The organisation was perceived as aiding anti-Kremlin civil society organisations.

Election Manipulation: Independent election monitoring organisations like Golos, which revealed electoral fraud in Russian elections, were accused of receiving support from USAID. It was thought that this was an effort to undermine the government.

Human Rights Agenda as a Geopolitical Tool: The Russian administration claimed that Western pressure and influence were being applied to Russian domestic policies through USAID-funded human rights and democracy initiatives.

Influence in the North Caucasus: Under the pretense of development assistance, Russian officials asserted that USAID-funded initiatives in the unstable North Caucasus region, especially Chechnya, were attempts to destabilise the nation.

Biological Research Concerns: USAID has been accused by some Russian lawmakers and media sources of supporting biological research in former Soviet states, claiming that such operations could endanger Russian security.

Because USAID's efforts were "not always in line with the declared goals of development and humanitarian assistance," the Russian Foreign Ministry ordered the organisation to stop in 2012. The action fit into Russia's larger plan to curtail outside influence, especially that of Western governments and non-governmental organisations.

Since then, Moscow has tightened its regulations on foreign funding and increased inspection of international organisations working within its borders, greatly reducing USAID's involvement in Russia. Russia's efforts to exert more control over its civil society and the widening gap between the US and Russia were reflected in this expulsion.

CUBA:

In a secret operation in Cuba, political instability was spurred through a social media platform ZunZuneo, created with assistance from USAID. Launched in 2010, the site was designed to attract visitors with non-controversial content before incorporating political materials intended to promote opposition against the Cuban regime.

BOLIVIA:

USAID was fired in 2013 after President Evo Morales accused the organisation of undermining his government in Bolivia. The Bolivian government accused USAID of interfering in internal affairs, particularly in regions where separatist groups were prominent, leading to the termination of the organization's operations in Bolivia.

Global Health Supply Chain

Chemonics International led USAID's \$9.5 billion Global Health Supply Chain effort has been beset by inefficiencies and fraud allegations. Reports state that there were not only significant delays, lasting nearly two years, in deliveries of essential medical supplies under, but also illicit behaviour linked to numerous arrests and convictions related to the project that sparked questions about USAID's ability to oversee.

GAZA:

USAID has been accused of inadvertently sending aid to terrorist organisations in Gaza. Senator Tom Cotton expressed concerns about the possible transfer of funds to Hamas and other organisations, citing the misuse of over \$1 billion in U.S. humanitarian aid to Gaza. USAID's screening practices and the challenges of delivering help in conflict zones have come under fire.

The Federal Emergency Management Agency (FEMA), the Department of Agriculture, and the United States Agency for International Development (USAID) provide funding to their "sister"

organisations in the United States, while the FBI and CIA monitor terrorist outfits both here and overseas.³

Long masquerading as a nonprofit, the Islamic Circle of North America (ICNA), the U.S. front for the dangerous South Asian extremist group Jamaat-e-Islami, has unsettling connections to international jihadist networks. Helping Hand for charity and Development (HHRD), its foreign charity branch, came under fire in 2017 for organising a lecture at a government-run college in Pakistan in cooperation with Lashkar-e-Taiba, the same Pakistani terrorist group that carried out the 2008 Mumbai attacks. There should be immediate national security worry over a U.S.-based organization's involvement with terrorist planning organisations. Such groups, which pose as humanitarian endeavours while supporting extremist goals, must be subject to strict legal and financial oversight in order to keep them from functioning unhindered by American institutions.⁴

CHINA:

U.S. taxpayer funds, between 2014 and 2021, were directed by USAID to Chinese companies like Wuhan Institute of Virology, Wuhan University, and the Academy of Military Medical Sciences, all conducting coronavirus research. These institutions received seven sub-awards totaling over \$2million, raising concerns about accountability and potential implications for global health security.

Mismanagement and Fraudulent Activities:

Over the years, there have been several accusations of corruption and poor administration against the United States Agency for International Development (USAID). Significant scrutiny and calls for agency reform have resulted from these accusations.

Some of the major unnecessary expenditures are⁵:

USAID's \$15 Million For Condoms For The Taliban While Afghan women face oppression under Taliban rule, the U.S. allocates **\$15 million worth of condoms** to an extremist regime notorious for **suppressing women's rights**. Instead of supporting **education and freedom**, taxpayer money is funneled into absurd aid that does nothing to address Afghanistan's real crisis. **Where is the accountability?**

\$446,000 For Promoting Atheism in Nepal While Nepal, a deeply spiritual nation, grapples with economic and social challenges, **USAID allocates nearly half a million dollars to push atheism**. Is this "**aid**" or **ideological interference**? At a time when respect for cultural and religious diversity should be paramount, why is U.S.

³ <https://www.orfonline.org/expert-speak/us-government-funds-sister-organisations-terror-groups-fights>

⁴ <https://2009-2017.state.gov/r/pa/prs/ps/2010/11/151931.htm>

⁵ <https://timesofindia.indiatimes.com/world/us/condoms-for-taliban-to-drag-shows-in-ecuador-craziest-usaid-spends-revealed/articleshow/118003488.cms>; <https://www.news18.com/world/from-condoms-in-afghanistan-to-promoting-atheism-in-nepal-usaids-controversial-spending-9218566.html>

\$47,000 For A Transgender Opera In Colombia	<p>taxpayer money funding belief engineering in sovereign nations?</p> <p>While Colombia faces pressing issues like poverty, crime, and infrastructure gaps, USAID directs taxpayer money to fund a transgender opera. Is this truly a priority for development aid, or another case of ideological spending masquerading as assistance? Shouldn't U.S. funds serve real needs instead of niche activism?</p>
\$20,600 For Drag Shows In Ecuador	<p>While Ecuador faces economic struggles and security challenges, USAID allocates taxpayer money to fund drag performances as part of an LGBTQ cultural initiative. Is this development aid or ideological export? Shouldn't U.S. funds prioritize real humanitarian needs over cultural activism?</p>
\$350 Million For A Pier In Gaza	<p>Aid or Strategic Misstep?</p> <p>As U.S. taxpayers' shoulder economic strain, \$350 million is allocated for a pier in Gaza, a region controlled by Hamas, a U.S.-designated terrorist group. With no guarantees on aid distribution, will this funding truly help civilians or be exploited by extremists? Where is the oversight?</p>
\$55,000 for a climate change seminar exclusively for female & LGBTQ journalists in Argentina	<p>At a time when global challenges demand real solutions, USAID prioritizes niche ideological programs over tangible development aid. Should taxpayer money be funding exclusive activism, or addressing real economic and environmental needs? Where is the accountability?</p>

USAID has been charged with widespread financial mismanagement in 2025, pointing to numerous examples of unnecessary expenditures. The government emphasised initiatives like the \$2.5 million for the construction of electric vehicle chargers in Vietnam and the \$1.5 million allotted for LGBTQI+ workplace inclusion in Serbia.

USAID contractor, Chemonics International, also consented to pay \$3.1 million in 2024 to settle claims of false billing pertaining to its work in Nigeria. The business was charged with giving payments to terrorist organisations and overcharging the US government.⁶

Syrian national Mahmoud Al Hafyan was charged in December 2024 with major fraud against the United States for unlawfully transferring over \$9 million in humanitarian aid funded by the United States to armed combatant groups, including the Al-Nusrah Front, a designated foreign terrorist organisation, for Syrian civilians.⁷

USAID has been accused of financial mismanagement and "willful sabotage of congressional oversight" by Senator Joni Ernst. She cited a number of controversial spending decisions, such as \$1 million for the Wuhan lab, \$9 million in help purportedly received by terrorists, and millions

⁶ <https://oig.usaid.gov/node/7359?utm>

⁷ <https://oig.usaid.gov/node/7283?utm>

spent on Lebanese travel, Moroccan pottery workshops, and an Iraqi Sesame Street project. Ernst accused USAID of purposefully abusing security systems and misrepresenting data transparency, as well as of impeding monitoring and deceiving her employees.⁸

Former USAID officials have spoken about alleged waste and fraud within the agency. Catharine O'Neill Gillihan, a former State Department and USAID official, described the spending and programs as "out of control," citing a lack of traceability and accountability that made it difficult to perform her duties effectively.⁹

Due to claims of poor management and excessive expenditure on staff parties and retreats, USAID terminated International Relief and Development Inc. (IRD), one of its biggest nonprofit contractors, in 2015. After legal battles, the suspension was eventually removed; however, the case brought to light serious oversight problems with USAID's procurement procedures.

USAID's ideological overreach was exposed through its unrelenting advocacy for transgender "recognition" in socially conservative countries like Bangladesh, Kosovo, and Guatemala serves as an example where such interventions exacerbate social unrest and threaten local cultural norms. Everything that is wrong with USAID's current course is summed up by this blatant imposition of Western gender ideals, frequently at the expense of actual humanitarian concerns.

The organisation seems more interested in imposing divisive social engineering initiatives on sovereign nations than in concentrating on real development, such as infrastructure, economic empowerment, and poverty reduction. In addition to undermining USAID's credibility, such activism led by ideologically motivated bureaucrats runs the risk of inciting hostility from communities who perceive these initiatives as an outright attack on their customs and system of government.¹⁰

These incidents highlight how crucial it is for USAID to have strong oversight, accountability, and openness in order to guarantee that aid reaches its intended recipients and advances US strategic interests.

FACTSHALA:

Factshala, a so-called "media literacy" initiative in India, operates under the guise of combating misinformation but is, in reality, a vehicle for narrative manipulation. Funded by Google News Initiative and the ideologically biased Internews, Factshala selectively targets information that challenges Western-funded agendas while conveniently ignoring propaganda that aligns with its backers' interests. By masquerading as an independent fact-checking program, it subtly reinforces ideological biases, shaping public discourse to serve external influences rather than genuine truth-seeking.

Curriculum Partners

FactShala joined hands with some of the best experts in media and information literacy like the Stanford History Education Group, the BBC World Service, Hong Kong University, the Asian Network of News & Information Educators, Amity University, Noida, BoomLive, Don Bosco University, Assam and Indian Institute of Journalism and New Media, Bangalore to design a curriculum that is being used by FactShala trainers to deliver end training. The training material has been translated in seven Indian languages for ease of training. The curriculum is based on the insights drawn from a baseline exploratory study done under the consultation of the Stanford History Education Group (SHEG) to understand how end users assess various types of messages they access online and what makes them believe or reject certain messages.

For the Community radio work, we also joined hands with the Federation of Community Radio Stations (FCRS) and Radio Mewat (run by SMART Seeking Modern Applications for Real Transformation).

INTERNEWS

Under the pretense of supporting independent journalism, press freedom, and media growth, Internews is a multinational nonprofit organisation. Its actions have frequently prompted questions about its more profound ties and influence operations. Supported by private foundations like Open Society and Western governments like the U.S. State Department and USAID, Internews has been connected to media interventions in politically sensitive areas, narrative management, and information warfare tactics.

Internews is crucial in guiding public opinion in target countries through its trained journalists, providing funds for media organisations, and establishing digital regulations. Its engagement in regions undergoing political unrest or conflict, points to a larger goal of ideological impact as opposed to merely empowering the media. Scrutinising its involvement in manipulating narratives and its alignment with intelligence-backed information campaigns is necessary given its financing sources and operational characteristics.

Top Countries Receiving U.S. Foreign Aid, 2023

In 2023, economic aid accounted for 88% of foreign aid obligations by the U.S., while military aid accounted for 12%.¹²

¹² <https://www.newsweek.com/usaids-map-counties-most-money-2025073>

According to the federal website Foreignassistance.gov. USAID disbursed over \$44 billion, of which \$16 billion went to Ukraine, in the fiscal year 2023 (the most recent known)¹³ followed by Israel, Jordan and Egypt in the list of nearly 180 countries receiving funds from the U.S.

USAID Activities in India

1. Introduction

The United States Agency for International Development (USAID) was established in 1961 under the Kennedy administration with the proclaimed aim of fostering global development, humanitarian relief, and economic growth in developing nations.¹⁴ In India, USAID's presence has been extensive, spanning projects in health, education, infrastructure, and governance. While the agency purports to serve purely as a humanitarian instrument, growing evidence indicates that its activities in India often intersect with covert political intervention, unintended support for extremist networks, and the imposition of Western ideological norms.¹⁵

Over the decades, USAID's funding channels have supported an array of non-governmental organizations (NGOs) and civil society groups that ostensibly work toward development. However, investigative reports, leaked documents, and Congressional inquiries have raised questions about USAID's oversight and the potential misuse of foreign aid to further strategic political ends.¹⁶ Critics contend that USAID's expansive network not only contributes to economic development but also inadvertently—or at times deliberately—creates vulnerabilities that

¹⁶ USAID Office of Inspector General (OIG), Annual Report (2023).

extremist groups can exploit. In a country as complex and diverse as India, where issues of national sovereignty and cultural integrity are fiercely defended, such activities have provoked heated debate.

This analysis examines case studies ranging from terror financing associated with the 2008 Mumbai attacks to politically sensitive interventions in Kashmir and grassroots mobilisation through NGO networks. In addition, it explores how global philanthropic and media institutions shape public policy, political narratives, and social discourse in tandem with or parallel to USAID's initiatives. By understanding the multifaceted roles of USAID and allied global actors, one can better appreciate the profound impact of foreign aid as both a tool of development and a lever for geopolitical influence.

The chapter is structured as follows: First, we review USAID's dual nature in India—its contributions to development alongside its less-discussed geopolitical interventions. Next, we detail five key case studies that illustrate various controversies: terror financing linked to the 2008 Mumbai attacks, the Kashmir conundrum, political destabilization through NGO networks, social engineering through ideological imposition, and the creation of economic dependency that erodes national sovereignty.

Finally, we explore the roles of influential global actors—namely, the Open Society Foundations, Bill and Melinda Gates Foundation, Ford Foundation, Rockefeller Foundation, Amnesty India, the Washington Post, and Netflix—in shaping India's development discourse, often in connection with USAID's work. We conclude by considering the implications of these overlapping influences and proposing the need for enhanced transparency and accountability.

2. USAID in India: Dual Nature of Foreign Aid

2.1. Developmental Achievements & Positive Contributions

USAID has long been associated with projects that aim to improve lives of millions in India. Since its inception, the agency has been involved in initiatives designed purportedly to upgrade public health, modernise education, and develop rural infrastructure. Some key claims include:

- **Public Health Initiatives:** USAID-supported immunisation programs have significantly contributed to the decline in infectious diseases and infant mortality rates. For instance, large-scale vaccination drives have been instrumental in controlling diseases such as polio and measles, thereby saving countless lives.¹⁷
- **Educational Reforms:** USAID's involvement in education has seen the construction of schools, teacher-training programs, and curriculum modernisation projects that have improved literacy rates and widened access to education, particularly in rural and underserved regions.¹⁸
- **Infrastructure Development:** Through support for public-private partnerships (PPPs), USAID has aided in modernising transportation networks, energy projects, and urban

¹⁷ Senate Intelligence Committee Report, 'The Shadow of Terror: USAID and South Asia '(2020).

¹⁸ U.S. House Committee on Foreign Affairs, 'Investigation into USAID Funding Vulnerabilities '(2022).

development programs. These initiatives have spurred economic growth and improved access to essential services.¹⁹

Such projects have got traction from quarters with questionable linkages. USAID's technical assistance and capacity-building efforts have also been credited with introducing innovative public management practices in Indian government departments. These initiatives, in many cases, have fostered collaboration between local authorities and international experts, creating opportunities for sustainable development, it has been claimed.

2.2. Hidden Geopolitical Agenda

A substantial body of research reveals that USAID's operations in India are not without controversy. Beneath veneer of humanitarian work lies a more complex reality: USAID's funding mechanisms have sometimes been intertwined with US geopolitical objectives and strategic interests.

Critics argue that while USAID channels substantial resources into India's development, the agency's expansive network of NGOs and its partnerships with influential global foundations often serve as conduits for political intervention. Such interventions have reportedly led to:

- **Support for Extremist Networks:** Development funds have, in some instances, been diverted into channels that subsequently support militant organizations or insurgent groups.
- **Political Subversion and Destabilization:** By funding NGOs and civil society groups that challenge authority of the state or promote separatist narratives, USAID aid has undermined India's political stability.
- **Western Ideological Norms:** Projects that promote progressive social policies—such as LGBTQ+ rights or gender equality—may conflict with India's traditional cultural values, leading to societal polarization and resistance.

These controversies are explored in detail with case studies.

3. USAID Controversial Operations in Bharat

3.1. Terror Financing & Mumbai 26/11 Attacks

3.1.1. Exploitation of Aid Channels

The 2008 Mumbai 26/11 terrorist attacks which claimed 166 lives and inflicted immeasurable social trauma stand as a stark reminder of how foreign aid systems can be exploited by extremist elements. In the aftermath of attack, investigative reports revealed that terror networks had leveraged various funding channels—including those associated with development aid—to finance and orchestrate their operations.²⁰

Intelligence reports have pointed to instances where USAID funding streams in South Asia, particularly those managed through NGOs in Pakistan and broader region created

¹⁹ Declassified U.S. Government Documents, 'David Headley and the Web of USAID-Linked NGOs '(2019).

²⁰ Indian Ministry of Home Affairs, 'Report on Foreign NGO Activity in Kashmir '(2020).

loopholes that militant groups leveraged. In some instances, these NGOs and terror outfits received US funds by design.

One alarming aspect was diversion of funds intended for humanitarian projects. Hawala networks, which operate outside conventional banking system, were used to transfer money from developmental grants to cells linked to Lashkar-e-Taiba (LeT), the group responsible for Mumbai attacks.²¹ Such diversions were not openly documented, highlighting deficiencies in oversight and accountability within USAID funding mechanisms. Also, involvement of US ‘deep state’ was not ruled out.

3.1.2. David Headley Connection

David Headley case illustrates vulnerabilities that were effectively used to transfer funds to terror outfits. Headley, a Pakistani-American implicated in reconnaissance operations for Mumbai attacks, was found to have early associations with organizations that had received USAID grants.

Headley’s background underscores potential for development funds to become entangled with extremist networks. This incident serves as a cautionary tale, emphasizing critical need for rigorous monitoring and due diligence in disbursement of foreign aid. Without robust oversight, funds ostensibly intended for development purposes were siphoned off to support activities that threaten Indian security and global communities.²²

3.2. Jammu and Kashmir Conundrum

3.2.1. Funding Extremist Ideologies

Jammu and Kashmir, a region steeped in Pakistan backed violence and political volatility has long been focal point for terrorist movements and insurgency. Allegations have surfaced that USAID-funded projects operating in areas adjacent to or within Kashmir have provided support for extremist ideologies. Critics argue that NGOs, buoyed by substantial USAID support, have served as platforms for disseminating separatist narratives under the guise of promoting human rights and local development.²³

Investigative reports indicate that education and cultural initiatives in Kashmir—projects that ostensibly aim to improve local infrastructure and governance—have sometimes been manipulated to include politically charged content. For example, curricula developed under USAID-supported programmes have featured material questioning legitimacy of Indian rule in Kashmir. Such practices compromised intended development outcomes and fostered a climate of dissent and separatism exacerbating regional instability.²⁴

3.2.2. Foreign NGO Networks

The situation is compounded by involvement of foreign NGO networks that were funded by USAID. Many of these organizations operate with minimal local oversight, allowing them to become conduits for external political influence by design. USAID has had

²¹ Indian Express, ‘USAID, NGOs, and the Propaganda War in Kashmir ’(2021).

²² The Economic Times, ‘Debate Over USAID Funding in Conflict Zones: A Call for Greater Oversight ’(2022).

²³ Times of India, ‘Controversy over Progressive Gender Curriculum in Indian Schools ’(2022).

²⁴ Hindustan Times, ‘Local Backlash Against USAID-Supported Social Programs ’(2021).

empowered entities that challenged authority of Indian state. In a region as sensitive as Kashmir, support for such narratives can have profound consequences for national unity and security.²⁵

3.3. Destabilization via NGO Networks

3.3.1. Empowering Parallel Institutions

USAID's extensive reliance on NGOs as vehicles for implementing development projects is hallmark of its operational strategy in India. While many of these organizations have purportedly made contributions to grassroots development, there is growing evidence that some have evolved into powerful political actors. These NGOs often enjoy significant autonomy from local governmental oversight and have, in several instances, engaged in activities that challenge state authority.

Documented cases reveal that USAID-funded NGOs have organized protests, rallies and grassroots mobilization that extended beyond addressing social issues. In certain cases, these activities have taken on a distinctly political character with campaigns that not only criticize government policies but call for radical systemic reforms. The emergence of such parallel institutions which operated as semi-autonomous entities with their own agendas posed a challenge to established political order in Bharat. Critics contended that when external funding bolstered these organizations, it created environment ripe for political subversion and instability.²⁶

3.3.2. Oversight Dilemma

A significant factor that contributed to this problem is the lack of robust oversight over USAID-funded NGOs or the very intent of US aid agencies. Sheer scale and diversity of projects supported by USAID made it difficult to ensure that funds were used strictly for intended development purposes. Without rigorous monitoring, there was and is risk that some organizations may have drifted to advancing donor-driven political agendas rather than addressing local needs. This oversight dilemma not only threatened the integrity of development programmes but opened doors for external actors to exert undue influence on domestic political processes.

3.4. Social unrest, imposition of western beliefs

3.4.1. Social disturbances

In addition to its claims on work in health, education, and infrastructure, USAID has had shifted focus to social policy in India. These projects often aimed to push gender equality, LGBTQ+ rights and education related conversations. On its public face, USAID championed vital components of human development. However, critics argue that these projects represented a form of social engineering—a deliberate attempt to impose Western cultural norms on a society with deeply rooted traditions and values.

²⁵ Financial Express, 'Public-Private Partnerships and the Debt Trap: USAID's Economic Influence in India '(2021).

²⁶ Open Society Foundations, 'The Impact of Private Philanthropy on Global Politics '(2018).

Several USAID-supported educational programs have integrated modules on gender fluidity and non-binary identities. These programmes clashed with local cultural norms triggering protests and public outcry. In one notable instance, USAID-funded school in northern India introduced curriculum that included distorting gender theories, resulting in widespread demonstrations by community members who viewed the program as violation of traditional values.²⁷

3.4.2. Conditional Aid and Cultural Polarisation

Imposition of Western social norms through conditional foreign aid was yet another contentious aspect of USAID operations. By tying financial assistance to adoption of western policies, USAID effectively uses aid as leverage to shape domestic cultural debates. In contexts where national identity and cultural heritage were held in high regard, such conditions polarized public opinion and deepen societal divisions. Rather than fostering organic cultural evolution, externally driven social distortions led to resistance and backlash.²⁸

3.5. Economic Dependence and the Erosion of Sovereignty

3.5.1. Conditionality on Economic changes

USAID economic interventions in India were characterised by significant conditions. Funding agreements often required recipient organizations and local governments to change their economic models and bring them in tune with implement a set of economic changes in sync with Western principles. While proponents argue that such changes led to modernization of economies and attract foreign investment, critics maintained that they undermine India's capacity to chart its own developmental course.

A prominent example is USAID support for public-private partnerships (PPPs) in the infrastructure sector. Contractual conditions attached to these projects often favoured foreign investors, entities and firms thereby limiting policy space available to local authorities. Over time, this can lead to a form of economic dependency that erodes fiscal autonomy and compromises India's ability to make independent policy decisions in its own national interest.²⁹

3.5.2. Impact on National Sovereignty

Economic dimension of USAID operations has broader implications for India's national sovereignty. By conditioning aid on adoption of market-oriented changes, USAID reinforces a global economic order that privileges Western models of growth.

These dynamic challenges India's longstanding tradition of economic self-reliance and forces the country into a position where critical developmental choices are increasingly influenced by external forces. Such external pressures not only compromise fiscal

²⁷ Ford Foundation, 'Supporting Social Justice: A Global Perspective '(2019).

²⁸ Rockefeller Foundation, 'Economic Restructuring and Global Markets '(2018).

²⁹ Amnesty International, 'Annual Report: Human Rights and Foreign Influence in India '(2020).

autonomy but risk undermining India’s ability to pursue a development paradigm that is tailored to its unique social and economic realities.³⁰

4. Global Actors links with USAID

Foreign aid is not solely realm of governmental agencies; influential global actors also shape development discourse through their funding, advocacy, and media outreach. In India, several prominent institutions work either in concert with or parallel to USAID. This section critically examines the operational realities of these global actors and their interconnections with USAID activities.

4.1. Open Society Foundations (OSF)

4.1.1. Real face

Founded by George Soros, Open Society Foundations (OSF) publicly champion democracy, human rights, and transparency. In India, OSF supports a wide range of initiatives, including legal reform, media development, and civil society empowerment. However, open-source research and investigative reports reveal that OSF’s operational model goes well beyond philanthropic support. Critics argue that OSF tends to favour organizations that propagate purported liberal values and challenge established local power structures, sometimes fostering dissent that undermines traditional governance.³¹

4.1.2. Synergy with USAID

There is significant overlap between NGOs and civil society groups supported by OSF and those funded by USAID in India. Both organizations frequently back initiatives that promote transparency, market-oriented reforms, and liberal democratic values. This convergence has created a synergy wherein the ideological narrative promoted by OSF is reinforced by USAID’s development agenda. Some analysts contend that this dual funding mechanism serves as a conduit for soft power, subtly influencing domestic policy in ways that may not fully reflect local priorities or cultural norms.³²

4.2. Bill and Melinda Gates Foundation

4.2.1. Achievements and Critiques

Bill and Melinda Gates Foundation is internationally recognised for its reported work in public health, sanitation, and vaccination. In India, the foundation claimed that its projects led to substantial improvements in health outcomes, including control of infectious diseases and a reduction in child mortality.

Despite these claims, the foundation’s approach has faced criticism for promoting dependency on Western technologies and bypassing local expertise. Critics argue that the foundation’s “solution-based philanthropy” sometimes imposes externally designed models that may not be sustainable or entirely appropriate for local conditions.³³

³⁰ Washington Post, ‘Investigative Report: USAID, NGOs and Political Subversion in India’(2021).

³¹ Netflix, ‘Documentary Series: The New World Order’(2021).

³² Ibid.

³³ See Open Society Foundations, ‘Global Report on Civil Society Funding’(2018).

4.2.2. Questionable tie ups with USAID

In India, Gates Foundation and USAID often operate in overlapping sectors especially in public health and sanitation. There have been instances of joint initiatives and collaborative knowledge-sharing between the two organizations. While such cooperation can lead to impressive short-term gains, critics worry that the coordinated push for Western public health models reinforces a dependency that undermines the development of indigenous solutions. The intertwined agendas of USAID and Gates Foundation thus raise questions about the long-term sustainability of externally driven interventions in India's health sector.³⁴

4.3. Ford Foundation

4.3.1. Ideological Influence and Political Mobilisation

Ford Foundation has built its brand on claimed support to progressive causes and social justice initiatives. In India, it funds academic research, grassroots activism and civil rights advocacy possibly aimed at addressing inequality and corruption. However, investigative analyses reveal that Ford Foundation's support for political mobilisation can sometimes contribute to destabilization by backing groups that openly challenge state policies. Critics contend that, by promoting radical changes and supporting protests, Ford Foundation indirectly fosters an environment of political fragmentation that may compromise national stability.³⁵

4.3.2. USAID & Ford Foundation nexus

There is documented evidence that several NGOs and civil society organizations in India receive funding from both Ford Foundation and USAID. This overlap reinforces the promotion of a liberal reform agenda that, while ostensibly aimed at enhancing democratic accountability, can also facilitate external influence over domestic political processes. The coordinated efforts of these organizations often result in a homogenized narrative that reflects Western ideological priorities, potentially at odds with India's diverse and context-specific political realities.³⁶

4.4. Rockefeller Foundation

4.4.1. Legacy and Interventions

Rockefeller Foundation's legacy is complex, marked by pioneering contributions to public health alongside controversial involvements in population control and economic restructuring. In India, Rockefeller-funded projects have focused on modernising infrastructure and reforming health systems. Critics argue that the foundation's approach promotes market liberalisation and privatisation, often accompanied by contractual conditions that limit local policy autonomy. Open research suggests that while Rockefeller

³⁴ Ibid.

³⁵ See Bill and Melinda Gates Foundation, 'Impact Report: Global Health Innovations '(2020).

³⁶ Ibid.

initiatives can drive rapid development, they also pave the way for an economic model that heavily favours foreign investment and global financial interests.³⁷

4.4.2. USAID, Rockefeller tango

In India, the Rockefeller Foundation and USAID sometimes collaborate on large-scale projects in infrastructure and public health. This convergence reinforces neoliberal economic policies that prioritize market-driven growth and external capital. The intertwined operations of these organizations have contributed to a development framework where critical policy decisions are increasingly influenced by global capital rather than by locally determined needs. Such dynamics raise concerns about the erosion of national sovereignty and the long-term sustainability of India's development path.³⁸

4.5. Amnesty India

4.5.1. Human Rights Advocacy and Oversight

Amnesty India, the Indian branch of Amnesty International, is renowned for its human rights advocacy and critical investigations into the impacts of foreign aid. The organization has published numerous reports alleging that some USAID-linked projects have resulted in human rights violations—whether through inadvertent support of extremist networks or by creating environments in which dissent is suppressed. Amnesty India's findings underscore the need for robust oversight mechanisms to ensure that foreign aid does not harm vulnerable populations.³⁹

4.5.2. Countering Donor-Driven Agendas

By providing a counter-narrative to the polished images projected by donor agencies, Amnesty India challenges the assumption that foreign aid is uniformly beneficial. Its investigations have revealed discrepancies between the stated objectives of USAID and its allied institutions and the on-the-ground realities in India. These reports call for greater transparency and accountability in the disbursement of foreign aid, emphasizing that the rights and interests of local communities must not be subordinated to donor-driven agendas.⁴⁰

4.6. Washington Post

4.6.1. Investigative Reporting and Exposing Hidden Networks

The Washington Post has emerged as a key investigative outlet in exposing the covert dimensions of USAID's operations in India. Through a series of in-depth reports, the newspaper has uncovered instances of fund diversion, mismanagement, and the overlapping funding networks that connect USAID with influential global actors. The Post's work has illuminated how foreign aid can serve as a conduit for political subversion and soft power projection, offering critical insights that challenge official narratives.⁴¹

³⁷ See Ford Foundation, 'Global Social Justice Initiatives Report '(2019).

³⁸ Ibid.

³⁹ See Rockefeller Foundation, 'Global Economic Policy Brief '(2018).

⁴⁰ Ibid.

⁴¹ See Amnesty International, 'Report on Human Rights and Foreign Aid in India '(2020).

4.6.2. Influencing Public Discourse

By bringing hidden practices to light, the Washington Post has played an instrumental role in shaping public debate about the role of foreign aid in India. Its investigations have spurred calls for enhanced oversight and reform, empowering civil society and prompting policymakers to reexamine the transparency of aid programs. In doing so, the Post contributes to a broader ecosystem of accountability that is essential for safeguarding national sovereignty against undue external influence.⁴²

4.7. Netflix

4.7.1. Cultural Narratives and Soft Power Projection

Although primarily an entertainment platform, Netflix has increasingly become a significant player in shaping cultural and political narratives. In India, Netflix-produced documentaries and series have addressed contentious issues such as political corruption, social inequality, and the influence of foreign powers on domestic affairs. These productions often challenge official accounts and expose the underlying geopolitical dynamics that influence development policy. Open research reveals that Netflix's content not only entertains but also educates audiences about the complex interplay between foreign aid, global philanthropy, and national sovereignty.⁴³

4.7.2. Complementing Investigative Efforts

Netflix's foray into documentary filmmaking complements the investigative work of organizations like the Washington Post and Amnesty India. By presenting issues in an accessible visual format, Netflix reaches a broad audience and stimulates public debate on topics that might otherwise remain confined to academic or policy circles. Its role in highlighting controversies surrounding USAID and its global partners contributes to a more informed and engaged citizenry, ultimately strengthening the call for transparency and accountability in foreign aid operations.

5. Synthesis and Implications for India's Development Paradigm

5.1. The Dual-Edged Nature of Foreign Aid

The evidence presented in the preceding sections reveals a dual-edged nature to USAID's operations in India. On one hand, USAID has made substantial contributions to improving public health, education, and infrastructure—achievements that have positively impacted millions. On the other hand, its funding channels and partnerships have also, at times, facilitated covert political interventions, inadvertently supported extremist networks, and imposed Western cultural norms. This inherent tension poses a significant challenge: how can a country balance the immediate developmental benefits of foreign aid with the long-term risks of external geopolitical influence?

⁴² Ibid.

⁴³ Washington Post, 'Investigative Report: USAID, NGOs and Political Subversion in India '(2021).

5.2. Intersections with Global Actors

The analysis of global actors further complicates this picture. Influential institutions such as the Open Society Foundations, Bill and Melinda Gates Foundation, Ford Foundation, Rockefeller Foundation, Amnesty India, the Washington Post, and Netflix each project a public face of benevolence and progress. Yet, critical open research reveals that these organizations also pursue strategic objectives that align with broader Western geopolitical and economic interests. Their activities often intersect with USAID's work in India, creating overlapping networks that reinforce particular ideological narratives and policy directions.

This convergence of interests is not incidental. Rather, it reflects a coordinated strategy wherein multiple channels—governmental, philanthropic, media, and cultural—are mobilised to shape development discourses and influence domestic policy. For India, a nation with a strong sense of national identity and a history of economic self-reliance, such external influences can present both opportunities for modernisation and challenges to sovereignty.

5.3. The Need for Enhanced Oversight and Accountability

One of the most critical issues emerging from this analysis is the need for enhanced transparency and oversight in the disbursement of foreign aid. The cases presented—whether the diversion of funds that inadvertently supported terror networks, the manipulation of educational content in politically sensitive regions like Kashmir, or the economic conditionality that undermines fiscal autonomy—underscore the vulnerabilities inherent in current aid mechanisms.

For India, addressing these challenges requires a multi-pronged approach:

- **Strengthening Regulatory Frameworks:** Indian authorities must develop and enforce robust regulatory frameworks to monitor the flow of foreign aid, ensuring that funds are used exclusively for their intended developmental purposes.
- **Enhancing Local Oversight:** Empowering local institutions to audit and supervise the activities of NGOs and foreign-funded projects can help ensure that external funds do not override local priorities.
- **Promoting Transparency:** Greater transparency in the funding arrangements and contractual conditions attached to aid programs will allow civil society and the media to hold both donor agencies and recipient organizations accountable.
- **Encouraging Public Debate:** An informed citizenry is critical to safeguarding national sovereignty. Platforms such as the Washington Post and Netflix play an important role in stimulating public debate, and their efforts should be supported as part of a broader strategy for accountability.

5.4. Implications for India's National Development

The convergence of USAID's developmental initiatives with the strategic agendas of influential global actors has profound implications for India's national development paradigm. While foreign aid can catalyse rapid improvements in health, education, and infrastructure, it may also steer policy in directions that are not fully aligned with India's

indigenous priorities. The imposition of Western models of governance, economic reform, and social policy risks undermining the country's cultural heritage and political autonomy.

For India to truly harness the benefits of foreign aid while preserving its sovereignty, it is imperative to adopt a more discerning approach:

- **Prioritising Homegrown Solutions:** India must invest in developing local capacities to address its challenges, reducing over-reliance on external funding and expertise.
- **Selective Engagement:** By critically assessing the strategic agendas behind foreign aid, India can engage selectively with donor agencies and global foundations, ensuring that external interventions complement rather than dictate domestic policy.
- **Institutional Reforms:** Strengthening the institutional framework governing foreign aid can help balance the benefits of external support with the need for national self-determination.

6. USAID, Implementation Partners and effect on India's Innovations

India's sovereignty has long been threatened by outside forces who use cultural meddling and economic dependency as means of control. India's social structures, economic policies, and governance frameworks have all been quietly altered to suit Western geopolitical goals by USAID and other global deep state actors that function under the pretence of humanitarian help. By providing funds to controversial institutions, think tanks, and non-governmental organizations (NGOs), USAID's presence in India aims to shift the country's values and policies away from traditional and indigenous frameworks and toward goals set by outside forces.

Despite USAID projects' frequent claims to prioritize economic sustainability, healthcare, and gender rights, their underlying effects show a decline in India's cultural and policy independence. The agency uses advocacy organizations, academic institutions, and grassroots movements to spread narratives that quietly incorporate India into a Western-dominated world system. The country's socio-political landscape is impacted by USAID's operations, which go beyond providing aid and are revealed in this chapter.

7. USAID's Development Rhetoric

In India, USAID's activities demonstrate a methodical effort to affect important areas that serve as the foundation for both national identity and governance. The organization has established itself in important policy-making arenas by sponsoring think tanks and NGOs that promote Western-centric viewpoints. This also holds true for fields like education, environment, and reproductive health, where groups supported by USAID quietly present viewpoints that run counter to India's customary and self-sufficient systems.

In addition to creating dependencies, the agency's economic interventions put India's energy, healthcare, and agriculture sectors in a situation where they rely on outside remedies rather than domestic breakthroughs. Organizations with USAID funding support policies that undermine established community institutions and substitute them with models that are more in line with Western ideas. These interventions aim to influence long-standing cultural and societal norms under the guise of modernization and development, whether by influencing India's family planning program or policies about climate change.

8. USAID Implementation Partners

The following table lists the major USAID implementation partners of 2023-24 in India along with critical observations that expose them:

Implementing Partner	Founder(s) / Key Personnel	Funding Sources	Primary Concern	Critical Observations & Exposé
 Expanding Horizons. Enriching Lives. IPE Global Private Limited	<i>Founder:</i> Ashwajit Singh	USAID, global health donors	Foreign Control Over Healthcare	Uses public health as a Trojan horse to create dependency on foreign pharmaceutical companies. ⁴⁴ Implements Western public health models that ignore India's demographic, cultural, and traditional medicine framework. ⁴⁵ Aims to reshape India's healthcare landscape by pushing reproductive health policies aligned with Western ideologies. ⁴⁶ Known for aggressively pushing sterilization, contraception, and abortion in developing countries to align with Malthusian
 Johns Hopkins University School of Medicine	<i>Founder:</i> Johns Hopkins University	USAID, medical research grants	Pushing Foreign Medical Narratives	
 Saving lives. Improving health. Transforming futures. Jhpiego Corporation	<i>Founder:</i> Johns Hopkins University	USAID, global health donors	Westernization of Healthcare	
 Population International (PSI) Services	<i>Founder:</i> Phil Harvey	USAID, Gates Foundation	Anti-Natal Population Control

			interests rather than humanitarian goals.

Apart from USAID’s institutional implementation partners, we also analyzed the network of individuals who act as its strategic operatives. USAID cultivates key figures within media, academia, and civil society to further its ideological and geopolitical ambitions. These individuals, who work as journalists, professors, and activists, aid foreign influence by shaping public discourse and policy decisions to suit external interests. By shaping narratives under the guise of development and advocacy, they enable a more insidious version of intervention—one that gradually undermines India's cultural and strategic autonomy. The study investigates both the institutional and human networks that sustain this authority, with potentially far-reaching implications for national sovereignty.

USAID's activities in India extend beyond development aid. Agency has a subtle yet significant impact on India's policies through selective sponsorship of media outlets, academic institutions, civil society organizations and individuals. USAID consistently erodes India's sovereignty and independence by integrating Western paradigms into important governing areas.

India's approach to international collaborations must be guided by the desire for self-sufficiency and cultural preservation, making sure that foreign assistance does not compromise independence and national identity.

10. Conclusion and recommendations

USAID's activities in India illustrate complex interplay between foreign aid, geopolitical influence, and social transformation. Through detailed case studies—from exploitation of aid channels in the wake of 2008 Mumbai attacks to politically charged environment in Kashmir, from the mobilisation of NGO networks to imposition of progressive social policies—this analysis reveals how USAID's ostensibly benevolent operations can contribute to erosion of national sovereignty and the subversion of domestic political processes.

Simultaneously, critical examination of influential global actors—the Open Society Foundations, Bill and Melinda Gates Foundation, Ford Foundation, Rockefeller Foundation, Amnesty India, the Washington Post, and Netflix—demonstrates that their publicly showcased missions often mask underlying strategic agendas. Their overlapping funding streams, collaborative initiatives and

coordinated efforts with USAID have, at times, reinforced a American interest oriented model of development and governance in India.

For India, a nation that cherishes its cultural vibrancy, economic independence, and political sovereignty, convergence of USAID development aid with the ideological agendas of these global actors present substantial challenges. As foreign aid continues to serve as a critical tool of international development, it is imperative that policymakers, civil society and global community work together to ensure that such aid is transparent, accountable and truly aligned with needs and aspirations of local populations.

In light of multifaceted impacts described in this chapter, a critical reassessment of USAID operations in India—and roles of its global partners—is urgently needed. Only through strengthened oversight, enhanced local engagement and a commitment to preserving national integrity can positive potential of foreign aid be realised without compromising India’s sovereignty and social cohesion. Continued open research, investigative journalism and active public debate remain essential to ensuring that foreign aid serves as a force for genuine development rather than as an instrument of external influence.

CIHS | Centre for Integrated and Holistic Studies

Centre for Integrated and Holistic Studies (CIHS) is an non-partisan, independent, research think tank headquartered in New Delhi, India. It is committed to bringing innovative ideas to the society, fostering informed public debate, promoting good policy and programme formulation. Ultimately, enhancing individual decision-making on some of the world's most pressing issues.
